ABSTRACT

The project 'Find It' concentrates on helping users to find path or way from one part to another part of a campus.This project makes use of speech recognition inorder for the user to give input through his voice or also he can give input through keyboard.

'Find It' is error-free , reliable, secure and gives faster results.' Find It' helps users to find routes and thus removes the task of asking other people for routes.'Find It' maintains a computerized record of all the locations and paths of a organization campus and is regularly updated by developers as new entries are needed to be added.
