CHAPTER 1

INTRODUCTION

Introduction to Topic

The "Find It" has been developed to overcome the problems related to manually asking for routes and paths in a organization which might not be accurate. This project is supported to eliminate and in some cases reduce the hardships faced . Moreover this system is designed to increase the time efficiency for the users.

The application reduces the possible method to avoid errors while entering the data by entering data given by authorized personnel only. Error messages are being displayed when invalid inputs are used. No formal knowledge is needed for the user to use this system. Thus it is user-friendly. This system can lead to error free, reliable and efficient system. Thus it will help organization to save time.

Every system has challenges to overcome and managing the information. Thus, this system will ensure that the system has equipped with the right level of information and details for future goals.

This is a web based application,which makes it accessible from any device with working internet connection .
